

TOTSCo Bulletin No 36
Date: 22 November 2023
Subject: Corrected Specifications Released by TOTSCo

TOTSCo is pleased to share the updated versions of two key documents: the Message Specification v1.1c and the API Specification v1.1a.

We've implemented these updates under a 'change freeze' condition, primarily due to the necessity of these corrections. These amendments address potential errors and inconsistencies that could have arisen if not addressed.

Key Updates in Message Specification v1.1c:

- **Alignment with Industry Process:** The 'ONTPortNumber' in the Match Confirmation message has been revised to 'PortNumber', ensuring consistency with industry standards.
- **Enhanced Example Messages:** Revisions throughout the document, with a specific reference to Appendix 10 of the Industry Process, detailing Openreach service identifiers.

API Specification v1.1a adjustments consist of minor corrections and clarifications listed in the document's change log. Minor corrections and clarifications are detailed in the document's change log. These adjustments are in line with the Hub's construction, and we do not foresee any impact on development activities.

For ease of reference, both documents are available in ['clean' and 'marked up' formats on our website](#), allowing those familiar with the earlier versions to easily spot the changes.
